About me

My name is Zahra Pourizadeh, a versatile individual, with a wide range of interests. From technological and engineering developments to drawing, painting and fashion! From digital signal processing to meditation!

I'm deeply interested in digital signal processing technologies especially in audio signals and music industry. Currently I'm working on a synthesizer project based on Raspberry Pi called *HybSynth*. I am hardworking, curious, and not afraid of daily challenges. I enjoy exploring innovative solutions and eager for team-work projects.

Education

First-year master student in Embedded Systems for Image and Sound Signal Processing
University of Clermont Auvergne

Bachelor's degree (Bac+4) in Computer Software Engineering
Al-Zahra University, Tehran - Jan 2018

Skills

Computer Skills :

Programming: Python, C, C++, Java

Python Libraries: NumPy, Matplotlib, Pandas, SciPy, Tkinter, sounddevice, Flask, SQLite, ...

Software: LabVIEW, MATLAB, Proteus

Technical Expertise & Tools :

Microcontrollers & Development Boards: AVR, Arduino, Raspberry Pi, STM32, Espressif

Signal processing: Fundamentals of Signals and systems, Audio and image processing

Languages:

French, English (B2), Spanish(A2),
Persian (Native Language)

Courses & Certifications

For a complete list of my certifications and courses, please visit the Licenses and Certifications section of my LinkedIn profile: [Linkedin](#)

Experiences

Webmaster

(April 2018 - April 2022)
Asa Pezeshki Novin Exir Co.

Internship

(April - July 2017)
Computer Center - Al-Zahra University

Projects

1. Master's Project (In Progress)

(2024-2025) - Developing an audio synthesizer based on Raspberry Pi, with various modules and sound effects. For more details, please refer to the projects section of my profile in:

LinkedIn: [LinkedIn](#)

Github: [HybSynthAudio Synthesizer](#)

2. Bachelor's Final Project

(Jan 2018) - An android application called "EXAM", written in Java and PHP (for server-side) using in Android Studio

3. Bachelor's Project in Software Engineering (Team Project):

Design of a software for hotel services and reservations

4. University Project (Team Project):

Implementation of a school registration system in C++

Publications

(2024-2025)

An Audio Synthesizer Based on Raspberry Pi

This article, based on my Master's project, explores the development of a modular audio synthesizer with advanced sound effects.

(January 2024)

Real-Time Remote Prediction (RPM) of Cardiac Crisis Occurrence Based on the Internet of Things and Machine Learning

Published in "*The 5th international Conference on Electrical Engineering, Computer, Mechanics and A.I. - Mashhad, 2024*" (<https://civilica.com/doc/1927782>)
